

LIGHTWEIGHT TARPS

# Overhang UL

Engineered tarps for the fast and light. This ultra-light range of Overhangs use 30 denier high-tenacity nylon 66 fabric with a silicone elastomer coating on both sides. The high relative strength and natural elasticity of this fabric make it an ideal choice for these tensile canopies. The silicone takes care of the UV exposure. Don't be fooled, these simple looking products incorporate an uncommon level of sophisticated design and construction detail to make them the best pitching and strongest available. Our trade-mark tear-drop guy attachment is now years old. We devised it, not as a universal guy cord pouch but because simple triangular reinforcing patches build-in new weaknesses. There is hardly a trip that we don't take an Overhang along - when we didn't, we usually wished we had! They are so useful during stops en route and on wet lay days. Looking at the medium size, at roughly 3 metres square and just 700 grams you can easily see why.

## FEATURES

- » 30 denier, 1500mm nylon 66 ripstop with silicone elastomer coating both sides
- » Unique, reinforced guy points with integral pockets
- » 3m guy lines supplied on corners, 2m on sides
