

OUTDOOR EDUCATION BACKPACK

Pack 101

Identical in construction and materials to our longstanding Outbreak model, the Pack 101's point of difference is its simplified back system. The Pack 101 uses the e-AX variant of the legendary WE AX cross-frame. The frame bars are fed into their individual harness panel sleeves from the outside of the pack bag. The bottom ends of the bars locate in strongly reinforced pockets built into the separate Convert 38 AX hip harness, a variant of the Perfect-FIT hip harness. The hip harness is then held firmly in place behind the hinged lumbar pad. Assembly and disassembly couldn't be faster or more simple. Like all WE packs this is a tough product suited to continuous use.
